To whom it may concern

In 1994, Joe Kennedy, President of WCI Environmental Solutions Inc., established a Canadian - Polish joint-venture WCI Natcol Sp. z o.o., environmental engineering company.

A number of environmental projects have been successfully completed in Poland, including waste composting, sorting & recycling, and water remediation projects. The composting/sorting/recycling plant built for the City of Zabrze was one of the first integrated waste management facilities in Poland, resulting in the City receiving an environmental award from the President of Poland.

For water remediation projects for the Lesna Pond and the Maroko Pond, WCI Natcol Sp. z o.o. received letters of commendation from the City of Katowice and the Polish Fishermen's Association, which later presented WCI Natcol Sp. z o.o. with a plaque. The Polish Fishermen's Association endorses the EOS-2000 system.

Joe Kennedy of WCI Environmental Solutions Inc. has visited Poland many times and a high degree of professionalism has always been maintained.

Should you wish additional information, please do not hesitate to contact me or Ewa Gawron-Dobroczyńska at the Embassy of Canada in Poland.

Yours sincerely,

Gregory Houlahan
Counsellor (Commercial)
